TIKKA

Special Bonus — Super Contest
Attention Dealers: Ask for contest forms and posters.

Pinpoint accuracy and Finlanders Craftsmanship at very competitive prices.

The firm of Tikkakoski AB began to manufacture rifles for the Finnish Army in 1918. The Tikka-made rifles quickly gained a reputation for superior accuracy. This "superior" accuracy of Tikka Military rifles created an instant demand for hunting and target rifles. Tikka naturally filled the demand, with sporting rifles that have continued to bolster the firms reputation for accuracy among Scandinavian shooters and hunters.

Tikka rifles are built on the time proven Mauser-type action. The bolt has two strong locking lugs in the front, with the bolt handle acting as the third auxiliary lug in the rear. The bolt head is completely recessed to enclosed the base of the cartridge, except where the strong, claw-type extractor comes through the bolt head recess. The entire bolt is machined from a single piece of metal. The firing mechanism is one piece.

The entire receiver is also milled out of a single block of metal. There is no investment casting or stamping to cut costs. The trigger is fully adjustable for weight of pull and silent sliding safety is conveniently located on the right side. Each barrel is straightened by hand and the extremely smooth bore is cold hammered and free floating in the stock.

The stocks are made from straight grained European walnut. The forearm is large and contoured flat on the bottom. For a more comfortable hold the pistol hand checkered grip has a palm swell, something not found on most production rifles.

The final trimmings include a rosewood forend cap, grip cap, with white spacers and a rubber recoil pad also with white spacer.

The overall quality of a Tikka rifle reflects the pride and work Finnish craftsmen put into every gun.

Tikka M65 Deluxe quick detachable (clip magazine) #3

Shown with (1) Tikka mounts and the revolutionary (2) new Ruko-Hakko "Electropoint" (crosshair & dot light up).

Special bonus: You will receive a complete set of Tikka steel ring mounts (suggested retail $75.00) with the purchase of any Tikka rifle.

Super Contest: As the proud owner of a Tikka rifle, you are entitled to participate in the exciting 1984 Ruko Tikka moose hunting contest (see below).

Go to your favourite dealer and take a good look. You will always be a winner with a Tikka rifle.

The Winner of the 1983 Ruko-Tikka Moose Hunting Adventure

Ruko of Canada Limited is proud to announce the winner of the 1983 Ruko-Tikka hunting contest. Dan Menard of Edmonton, Alta. is the lucky winner, and will travel to Finland this fall for an all-expense paid moose hunting expedition. His air fare, accommodations, meals and other expenses will be covered by Ruko of Canada Limited and Tikka. Mr. Menard shot a white-tail buck near Viking, Alberta November 9th, 1983, using a Tikka rifle (photo). It scored 147-1/16, using Boone & Crocket Club measuring rules. "It was the first white-tail buck I have shot" he told us. Well, congratulations Dan, we hope that your luck will continue in Finland.

RUKO-TIKKA 1984 HUNTING CONTEST for all TIKKA RIFLE OWNERS

If you buy a Tikka now, not only do you get the bonus of a set of Tikka steel ring mounts (retail value $75.00) free, but you will also be able to participate in the **1984 Ruko-Tikka Hunting Contest,** and, if luck shines on you, you will go to Finland in 1985, like Mr. Dan Menard will this year.

The contest rule is very simple. You have to be the owner of a Tikka highpower rifle. The winner will be the hunter who downs the largest buck using his Tikka rifle, on or before December 31st, 1984.

This year Ruko of Canada Limited has added **12 prizes;** 1 for each hunter who downed the largest buck in his province or territory. The prize will be a **4 Power X40 Ruko Electropoint Wide Angle Full View,** the revolutionary super scope (retail value $200.00).

The contest is open to all Canadian residents in possession of a valid deer hunting licence, who own a Tikka rifle. After you have got your deer, you have to enter the various measurements of the antlers into the Boone & Crockett Club entry form, which contains all measuring rules. Your favourite Ruko-Tikka dealer will be able to supply you with this form.

He will be very happy to show you the very exciting line of Ruko-Tikka rifles, and the Ruko Electropoint Scopes, a combination that will make your heart tick faster. So don't delay.

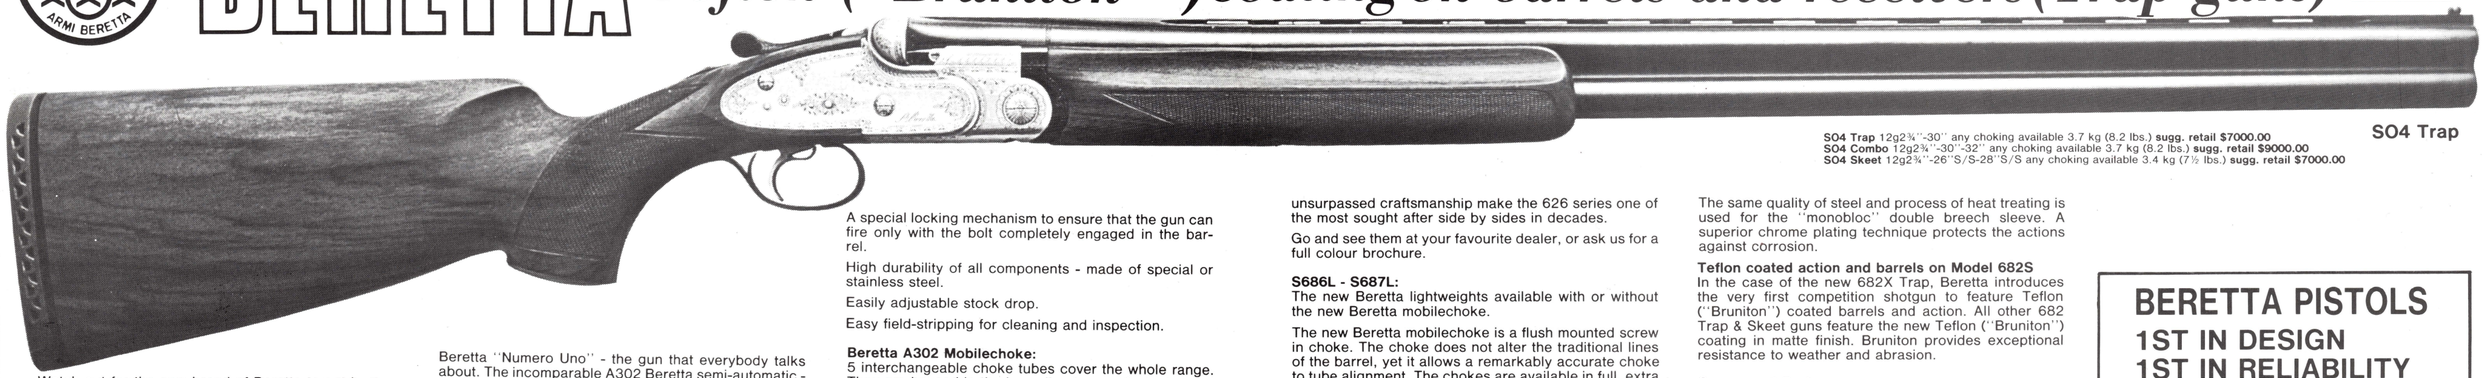
BERETTA

Introducing the NEW BERETTA - new Mobilchoke® system and Teflon ("Bruniton®") coating on barrels and receivers (Trap guns)

RUKO®



SO4 Trap

SO4 Trap 12g2¾"-30" any choking available 3.7 kg (8.2 lbs.) **sugg. retail $7000.00**
SO4 Combo 12g2¾"-30"-32" any choking available 3.7 kg (8.2 lbs.) **sugg. retail $9000.00**
SO4 Skeet 12g2¾"-26"S/S-28"S/S any choking available 3.4 kg (7½ lbs.) **sugg. retail $7000.00**

Watch out for the new breed of Beretta target busters: The magnificent Beretta S682's.
Trap, skeet, sporting.

Beretta S682
- engineered from Beretta's victories throughout the world.

Beretta S682
- featuring mechanical and functional innovations & developments.

Beretta S682
- providing exceptional versatility and durability through exacting attention to detail.

Beretta S682
- The result of over 300 years of gunsmithing excellence, combined with a relentless drive to improve, to innovate, to excell, to make the perfect gun, the best there is, and yet at a price you can afford.

Beretta "Numero Uno" - the gun that everybody talks about. The incomparable A302 Beretta semi-automatic - the gun that won the hearts of thousands of Canadian hunters.

The Universal Receiver: It takes both 3" magnum or 2¾" standard barrels, and the Beretta works smoothly regardless of the load. Cut-off lever makes exchange of ammo, and loading and unloading a cinch.

Advantages of the Beretta A302:
Rapidly interchangeable barrels.

Wide floating rib.

Fires all ammo from light to magnum loads (no adjustments necessary).

High accuracy and stability.

Extremely light recoil.

Reliable and safe cocking and firing mechanism.

A special locking mechanism to ensure that the gun can fire only with the bolt completely engaged in the barrel.

High durability of all components - made of special or stainless steel.

Easily adjustable stock drop.

Easy field-stripping for cleaning and inspection.

Beretta A302 Mobilechoke:
5 interchangeable choke tubes cover the whole range. They are housed in the bore, lined up perfectly to yield excellent accuracy and consistent patterns.

New Range of Beretta Side by Sides:
626ESST-627EELL
The most up to date and classic interpretation of the great traditional side by sides.
The new Beretta side by sides feature a concave rib, Anson type push button lock on fore-end. Totally enclosed, super strong receiver (firing mechanism is located in grooves machined into the lower part of the body). Problem-free coil spring firing mechanism and extremely fine and crisp trigger pull. An added safety feature is the second half cock on hammers, which eliminates the possibility of accidental discharge. Strong, wide extractors guarantee flawless ejection. Maintenance is simple as there are no screws used in *the receiver - just 3 simple pins. Highest quality* materials, latest technology and elegant design and unsurpassed craftsmanship make the 626 series one of the most sought after side by sides in decades.

Go and see them at your favourite dealer, or ask us for a full colour brochure.

S686L - S687L:
The new Beretta lightweights available with or without the new Beretta mobilechoke.

The new Beretta mobilechoke is a flush mounted screw in choke. The choke does not alter the traditional lines of the barrel, yet it allows a remarkably accurate choke to tube alignment. The chokes are available in full, extra full, improved modified, modified, improved cylinder, cylinder and skeet. This new system of chokes makes the 686L & 687L a truly universal shotgun.

Beretta barrels:
High quality steel - a tri-alloy of nickel, chromium and molybdenum - hardened and tempered to an extremely high maximum tensile stress point and elasticity limit, ensures maximum safety and gives the longest possible life to the gun. (This procedure is more expensive to work than steel normally used for barrels.)

Actions & Receivers:
The same high quality tri-alloy steel is used for actions and receivers. Case hardened and tempered by heat treatment, the strength of the action and receiver has a breaking point of 140 kg/mm², making the heart of the gun virtually indestructible.

The same quality of steel and process of heat treating is used for the "monobloc" double breech sleeve. A superior chrome plating technique protects the actions against corrosion.

Teflon coated action and barrels on Model 682S
In the case of the new 682X Trap, Beretta introduces the very first competition shotgun to feature Teflon ("Bruniton") coated barrels and action. All other 682 Trap & Skeet guns feature the new Teflon ("Bruniton") coating in matte finish. Bruniton provides exceptional resistance to weather and abrasion.

Component Parts:
Components subject to highest wear and impact are made of tri-alloy steel, specially suited to case hardening. They are heat-treated to obtain great strength (approx. 140 kg/mm²) and an extremely hard wear resistant exterior (hardness above 700 Vickes). Firing pins of all models and connecting and operating rods for automatic shotguns are made of stainless steel with a strength of 150 kg/mm². The same is being used in the missile industry.

Beretta stocks and fore-ends:
A Beretta specialist travels the 4 corners of the globe for one reason only — to find and select the best quality walnut available, to secure tomorrow's demand today.

Exquisite hand checkering, luxurious oil or gloss finish, the perfect wood to metal fit, are all visible signs of Beretta's excellence in gunsmithing craftsmanship.

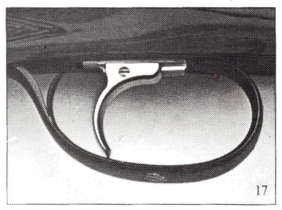
S682 Deluxe Trap with Standard rib or ramp: 12g2¾" 29½"F/M or F/IM; weight 3.65 kg (8.1 lbs.); **sugg. retail $3350.00**

Competition barrels
The S682 competition shotguns are manufactured with full length ventilated side ribs for better cooling during extended competition (picture 1). The high, ventilated top rib is also available as a stepped rib on S682 Trap model (picture 2). A 3mm x 13mm (.12 inch x .5 inch) luminescent front sight is standard.

Beretta is proud to present the very first competition shotgun to feature teflon ("Bruniton") coated barrels. Matte finished to minimize glare, the teflon finish provides exceptional resistance to weather and abrasion.

Compact action
The S682's style is enhanced by the newly designed double fences and finely stippled receiver, which also helps to reduce glare. Tasteful engraving highlights the stylish hinge pins. Special hardening ensures resistance to wear and greater durability and reliability of internal components. Special chromium-plating provides an extremely high resistance to weather



17

Adjustable trigger
The S682's innovative design also features a three position adjustable trigger. With 8mm (.32 inch) of travel, the trigger will adjust to the needs of most shooters (picture 5).

Stocks and forends
Shooters who wish to try stocks or forends of different configurations will appreciate the S682's easy interchangeability which requires only minor fitting. For those who wish to have a stock custom made, Beretta will provide semi-finished stocks.

Mobilchoke®
The S682 Sporting is equipped with flush-mounted, screw-in chokes. Beretta's Mobilchoke® does not alter the traditional lines of the barrel, yet it allows a remarkably accurate choke to tube alignment (picture 6). With Mobilchoke® and single selective trigger, the S682 Sporting is truly a universal shotgun.
